THE ART OF [®]EVOLUTION

- Reduces Energy Costs •
- Optimizes Results •
- Extends Lifetime •

Individual. Ecological. Financially Efficient.

The revolution in the application field of pleated cardboard filters.

I. Maximum of customization

The unique system of BASIC-PANEL and TOP-PANEL allows the combination of various media and thus an optimized adjustment to the individual conditions of your spray-booth.

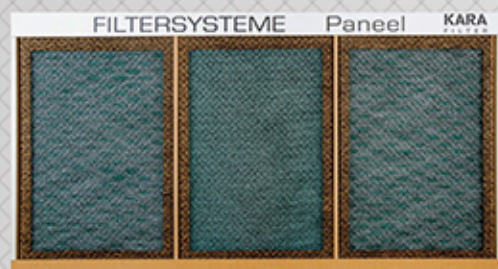

International standard dimensions allow an easy and problem-free replacement of solutions from other manufacturers in this product series as well. No modifications necessary.

BASIC-PANEL: Paint Pockets green.

**BASIC-PANEL: 3D-Filament +
Back lamination fleece.**

**BASIC-PANEL: Paint Pockets green.
TOP-PANEL: 3D-Filament.**

**BASIC-PANEL: 3D-Filament.
TOP-PANEL: 3D-Filament.**

II. Replacement of single sections

Contrary to the use of pleated cardboard filters or other filter media, the KARA PANEL system enables you to make selective changes to individual segments.

Individual panels in the hotspot area can be easily and quickly replaced, while segments with available capacity can remain in the system.

Highly efficient material management and extended life-time with minimized maintenance-related downtime of your spray-booth - achieve immense financial savings with minimal effort.

Easy and fast replacement of single sections

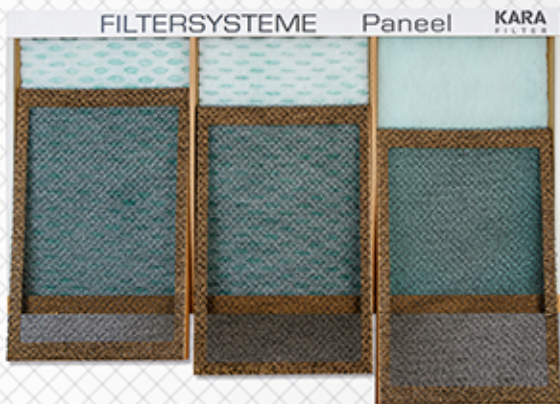

III. Reduction of energy-costs

The unique design and the open air passage throughout the panel result in significantly lower pressure-drops, making a substantial contribution to reducing your energy costs.

These low Pascal values, in contrast to solutions of other manufacturers, also remain consistently low throughout the majority of the operating time.

IV. Optimized results and conditions of work

In addition to reduced energy-costs, the cleanliness in the paint-booth and thus the working conditions and results are significantly improved, as a consequence of the separation behavior of the KARA PANEL series.

Easy and fast replacement of single sections
